3. Scope overview
4. Key definitions and terminology
5. Users and use cases
6. Information architecture and user flow
7. Page and template requirements
8. Functional requirements
9. Content and CMS requirements
10. Data, chart, media and technical requirements
11. Non-functional requirements
12. Accessibility and responsive requirements
13. Dependencies, assumptions and open questions
14. Acceptance criteria and approval gates

# 1. Document purpose and status

This Software Requirements Specification (SRS) defines the current functional, UX, content, accessibility and technical requirements for the Public Skills Australia Digital Workforce Insights Report (Digital WIR) platform.

This version has been prepared as a discovery alignment document. It is designed to support client review, internal delivery alignment, wireframing, design, development estimation and future approval gates.

## 2. Project background

Public Skills Australia currently produces detailed Workforce Insights Reports that are distributed as traditional report documents. The objective of this project is to create a digital report platform that makes the 2026 Workforce Insights Reports easier to present, browse, navigate and reuse across stakeholder settings.

The digital platform should preserve the integrity and depth of the source reports while translating the experience into a web-based format suited to stakeholder presentations, executive scanning, individual reading and deeper exploration of supporting content.

The project is not simply a PDF-to-web conversion. It requires a reusable report experience made from templates, components and structured content that can be applied across the 2026 report set and adapted for future reports.

## 3. Scope overview

### 3.1 In scope

- Digital WIR Home Page for selecting the active 2026 Workforce Insights Reports.
- Report-specific Transition Landing Page template for each Digital WIR.
- Introduction pathway and Introduction anchor page template.
- Executive Summary pathway and Executive Summary anchor page template.
- Reusable report section templates for deeper content pages.
- Structured navigation patterns including Back to Introduction and Back to Executive Summary actions.
- Downloadable PDF access for full source reports.
- Responsive web design and accessibility-aligned implementation.
- CMS/admin-editable content model, subject to final CMS selection.
- Reusable chart, data, table and media presentation components.

### 3.2 Current 2026 report set

| # | Report                                                                | Notes                                                                                                              |
|---|-----------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| 1 | Correctional Services Workforce Insights Report 2026                  | Own Transition Landing Page, Introduction pathway and Executive Summary pathway.                                   |
| 2 | Public Safety Workforce Insights Report 2026                          | Own Transition Landing Page; includes Defence, Fire and Emergency Services, and Police sections inside one report. |
| 3 | Federal and State/Territory Government Workforce Insights Report 2026 | Own Transition Landing Page, Introduction pathway and Executive Summary pathway.                                   |
| 4 | Local Government Workforce Insights Report 2026                       | Own Transition Landing Page; current detailed mapping and first wireframing reference.                             |

### 3.3 Out of scope / not assumed for this version

- Separate top-level cards for Defence, Fire and Emergency Services, and Police on the Digital WIR Home Page. These sit within the Public Safety WIR unless client confirms otherwise.
- Separate current cards for First Nations, Generative AI/Digital Transformation, or Gender Equality reports. These may be future/TBC reports but are not current 2026 report cards in this SRS.
- Backend engine and hosting details remain to be finalised if a single technical path is required.

## 4. Key definitions and terminology

| Term                           | Definition                                                                                                                                               |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Digital WIR Home Page          | The central gateway page for the current 2026 Digital Workforce Insights Reports. Users select one of the four active reports from this page.            |
| Report Transition Landing Page | A report-specific decision page that lets users choose between Introduction and Executive Summary. This replaces the earlier informal term "front door". |
| Introduction Page              | The report reference/individual reading anchor page. It explains the report context, structure, methodology and supporting reference material.           |
| Executive Summary Page         | The report presentation/big-screen anchor page. It provides a concise overview and enables click-through to deeper supporting content.                   |
| Deeper content page            | A supporting report section or detail page opened from an Introduction or Executive Summary pathway.                                                     |
| Back to Introduction           | Required navigation action on pages reached from the Introduction pathway.                                                                               |
| Back to Executive Summary      | Required navigation action on pages reached from the Executive Summary pathway.                                                                          |
| Reusable template              | A structured page or component pattern that can be reused across reports with sector-specific content.                                                   |

## 5. Users and use cases

The digital report platform must support different user behaviours. Some users will present the report on a large screen, while others will browse or reference the report individually.

| User type                       | Primary needs                                                                                    |
|---------------------------------|--------------------------------------------------------------------------------------------------|
| Executive / senior stakeholder  | Quickly scan key workforce insights and strategies; present the Executive Summary in meetings.   |
| Presenter / PSA team member     | Use Executive Summary as an anchor page and click through to deeper content while presenting.    |
| Industry stakeholder            | Understand sector-specific insights, data, strategies and supporting context.                    |
| Government / policy stakeholder | Access methodology, workforce evidence, strategic initiatives and federal/government context.    |
| Internal PSA editor/admin       | Maintain content, update report pages and upload supporting report PDFs through CMS/admin tools. |

| ID    | Use case                      | Description                                                                                            |
|-------|-------------------------------|--------------------------------------------------------------------------------------------------------|
| UC-01 | Select a 2026 report          | User lands on Digital WIR Home Page and selects one of the four active reports.                        |
| UC-02 | Choose a report entry pathway | User lands on a report Transition Landing Page and selects Introduction or Executive Summary.          |
| UC-03 | Present the Executive Summary | Presenter uses Executive Summary as a large-screen anchor and opens deeper supporting pages as needed. |
| UC-04 | Read report context           | User opens Introduction pathway to understand report context, structure and methodology.               |
| UC-05 | Navigate back to anchor       | User opens a deeper page and returns to Introduction or Executive Summary using a clear back action.   |
| UC-06 | Download source PDF           | User accesses the full PDF report for offline use or appendix/reference content.                       |

## 6. Information architecture and user flow

### 6.1 Platform-level flow

The primary user flow is as follows:

1. PSA Website
2. Digital WIR Home Page
3. User selects a 2026 report
4. Report Transition Landing Page
5. User selects Introduction or Executive Summary
6. User navigates to deeper report content as required

### 6.2 Digital WIR Home Page

The Digital WIR Home Page must present the four active 2026 reports as the primary selection options. It must not show Defence, Fire and Emergency Services, or Police as separate top-level report cards because these are contained within the Public Safety Workforce Insights Report.

### 6.3 Report Transition Landing Page

Each report must have a Transition Landing Page. The page is a decision point only and should not include full report navigation. The page must provide two equal entry options: Introduction and Executive Summary.

### 6.4 Anchor-page navigation pattern

- Pages opened from the Introduction pathway must provide a clear Back to Introduction action.
- Pages opened from the Executive Summary pathway must provide a clear Back to Executive Summary action.
- The Report Transition Landing Page must provide a clear way back to the relevant PSA website report/sector page.
- The Digital WIR Home Page must allow users to select another report without losing the overall platform context.

## 7. Page and template requirements

| ID   | Page/template                                      | Description                                                                                 | Priority |
|------|----------------------------------------------------|---------------------------------------------------------------------------------------------|----------|
| P-01 | Digital WIR Home Page                              | Report selection gateway showing the four active 2026 reports.                              | Must     |
| P-02 | Report Transition Landing Page                     | Decision page between Introduction and Executive Summary for each report.                   | Must     |
| P-03 | Introduction Page                                  | Reference anchor for report context, structure, methodology and supporting reference pages. | Must     |
| P-04 | Executive Summary Page                             | Presentation anchor with click-through buttons to deeper supporting content.                | Must     |
| P-05 | Information/Text Page                              | Reusable content template for About, Methodology and explanatory sections.                  | Must     |
| P-06 | Drivers of Change Template                         | Visual page/template for megatrends and drivers of change.                                  | Must     |
| P-07 | Industry Overview/Data Dashboard Template          | Reusable dashboard layout for workforce, map and profile data.                              | Must     |
| P-08 | Workforce Insights Template                        | Theme/insight hub and insight detail page templates.                                        | Must     |
| P-09 | Strategy/Initiatives Template                      | Reusable structure for proposed strategies and updates.                                     | Must     |
| P-10 | Existing Strategies / Federal Initiatives Template | Structured list/detail style for supporting strategy and initiative pages.                  | Should   |
| P-11 | Looking Forward Template                           | Future outlook and next steps page template.                                                | Should   |
| P-12 | PDF Download / Reference Utility                   | Downloadable full report and previous report links.                                         | Must     |

## 7.1 Digital WIR Home Page requirements

- Display a clear title, introduction and report selection area.
- Show exactly the four active 2026 reports unless future reports are approved for inclusion.
- Each card must click through to that report's Transition Landing Page.
- Public Safety card may include a small note: Includes Defence, Fire and Emergency Services, and Police.
- Include Contact Us action and standard PSA/global navigation as appropriate.

## 7.2 Report Transition Landing Page requirements

- Display report title and short introduction.
- Show two equal pathway cards: Introduction and Executive Summary.
- Include short descriptions explaining each pathway.
- Include Contact Us and Back to PSA report/sector page actions.
- Do not include full report navigation on this page.

## 7.3 Introduction Page requirements

- Act as the reference/individual reading anchor for the report.
- Explain report context, source, purpose, structure and methodology.
- Provide links to key reference sections and utilities such as Download PDF and Previous Report PDFs.
- Any connected deeper pages should include Back to Introduction.

## 7.4 Executive Summary Page requirements

- Act as the presentation/big-screen anchor page.
- Provide concise summary of the key insights and strategies.
- Include clear click-through buttons/cards to deeper supporting content.
- Any connected deeper pages should include Back to Executive Summary.
- Design must support easy scanning, large-screen presentation and quick return to the summary.

## 8. Functional requirements

| ID     | Requirement                                                                                                | Priority | Acceptance criteria                                 |
|--------|------------------------------------------------------------------------------------------------------------|----------|-----------------------------------------------------|
| FR-001 | The system shall display a Digital WIR Home Page with four active 2026 report cards.                       | Must     | User can view and select each of the four reports.  |
| FR-002 | Each report card shall link to a report-specific Transition Landing Page.                                  | Must     | Clicking a card opens the relevant transition page. |
| FR-003 | Each Transition Landing Page shall present Introduction and Executive Summary as two equal entry pathways. | Must     | User can select either pathway without ambiguity.   |
| FR-004 | Transition Landing Pages shall include a Back to PSA report/sector page link.                              | Must     | User can return to the relevant PSA website page.   |
| FR-005 | Transition Landing Pages shall include Contact Us action.                                                  | Must     | User can access contact page/form.                  |
| FR-006 | Introduction pathway pages shall include Back to Introduction where relevant.                              | Must     | Deeper pages include a visible return action.       |
| FR-007 | Executive Summary pathway pages shall include Back to Executive Summary where relevant.                    | Must     | Deeper pages include a visible return action.       |
| FR-008 | Executive Summary pages shall support click-through navigation to deeper supporting sections.              | Must     | User can open linked supporting pages from summary. |
| FR-009 | The platform shall support downloadable PDF links for each report.                                         | Must     | User can download/open full PDF report.             |
| FR-010 | The platform shall support reusable page templates across reports.                                         | Must     | New report content can reuse approved templates.    |
| FR-011 | The platform shall support structured content for charts, tables, maps and insight cards.                  | Should   | Data-rich content can be presented consistently.    |
| FR-012 | The platform shall support responsive layouts for desktop, tablet and mobile.                              | Must     | Pages remain usable at defined breakpoints.         |
| FR-013 | The platform shall support standard browser navigation and shareable URLs for report pages.                | Should   | Users can share or bookmark relevant pages.         |

|        |                                                                                         |        |                                      |
|--------|-----------------------------------------------------------------------------------------|--------|--------------------------------------|
| FR-014 | The platform shall support analytics tracking for key navigation and engagement events. | Should | Events can be measured after launch. |
|--------|-----------------------------------------------------------------------------------------|--------|--------------------------------------|

## 9. Content and CMS requirements

The final content source for each Digital WIR should be the approved report content supplied by PSA. User-flow diagrams and wireframes define structure and UX intent but should not override the approved report content without client confirmation.

| ID     | Area                      | Requirement                                                                                                         |
|--------|---------------------------|---------------------------------------------------------------------------------------------------------------------|
| CR-001 | Content source of truth   | Approved report Word/PDF content supplied by PSA shall be treated as the source of truth.                           |
| CR-002 | Structured content        | Report content should be entered into reusable structured fields where practical, rather than hardcoded into pages. |
| CR-003 | Page labels               | Page and navigation labels must use approved client terminology.                                                    |
| CR-004 | PDF access                | Each report must provide access to the full downloadable PDF.                                                       |
| CR-005 | Appendix handling         | Appendix/participant lists should be linked via PDF unless client asks for full web recreation.                     |
| CR-006 | Future report scalability | The content model should support additional future reports without rebuilding the platform.                         |

### 9.1 CMS/admin requirements - pending confirmation

| ID      | Requirement                                                       | Status                                |
|---------|-------------------------------------------------------------------|---------------------------------------|
| CMS-001 | Editors should be able to update text content for report pages.   | TBC based on CMS selection.           |
| CMS-002 | Editors should be able to update CTA labels and URLs.             | TBC based on CMS selection.           |
| CMS-003 | Editors should be able to upload or replace report PDF files.     | TBC based on CMS selection.           |
| CMS-004 | Editors should be able to manage chart/table data where feasible. | TBC - may depend on data model.       |
| CMS-005 | Admin roles and permissions should be defined.                    | TBC - client/admin workflow required. |

## 10. Data, chart, media and technical requirements

The Digital WIRs contain data-rich pages including maps, charts, tables, profile pages and strategy summaries. These should be implemented using reusable data visualisation standards where feasible.

### 10.1 Proposed technical stack

The following technical stack has been supplied by the Dev Lead for the Digital WIR platform. The stack should be treated as the proposed implementation approach for the SRS. Any unresolved alternatives are marked for confirmation.

| Area                         | Technology                           | Status / notes                                          |
|------------------------------|--------------------------------------|---------------------------------------------------------|
| Front-end core framework     | React / Next.js                      | Confirmed proposed stack                                |
| Front-end coding language    | TypeScript                           | Confirmed proposed stack                                |
| Styling and design framework | Tailwind CSS                         | Confirmed proposed stack                                |
| Back-end application engine  | Node.js (Express) / Python (FastAPI) | Decision still required if only one engine will be used |
| Data pipeline / API setup    | REST API                             | Confirmed proposed stack                                |
| Interactive charts           | Recharts                             | Confirmed proposed stack                                |
| Advanced data tables         | TanStack Table                       | Confirmed proposed stack                                |
| App state / data fetching    | TanStack Query                       | Confirmed proposed stack                                |
| Primary database             | PostgreSQL                           | Confirmed proposed stack                                |
| Caching / speed booster      | Redis caching                        | Confirmed proposed stack                                |

## 10.2 Data, chart and media requirements

| ID     | Requirement                                                                                                   | Priority |
|--------|---------------------------------------------------------------------------------------------------------------|----------|
| DR-001 | Charts and data visualisations should use consistent visual treatment across reports.                         | Must     |
| DR-002 | Data sources and source notes must be displayed where provided in the report.                                 | Must     |
| DR-003 | Charts should be accessible and understandable without relying on colour alone.                               | Must     |
| DR-004 | Interactive data elements should degrade gracefully on smaller screens.                                       | Should   |
| DR-005 | Media placeholders such as video/visual blocks should be optional and CMS-manageable if used.                 | Could    |
| DR-006 | The proposed charting approach is Recharts. Any map/geographic visualisation library remains TBC if required. | TBC      |

## 11. Non-functional requirements

| ID      | Category           | Requirement                                                                                     | Priority |
|---------|--------------------|-------------------------------------------------------------------------------------------------|----------|
| NFR-001 | Performance        | Pages should load quickly and avoid unnecessary heavy assets, especially for presentation use.  | Must     |
| NFR-002 | Reliability        | Core report content and navigation should remain available without broken links.                | Must     |
| NFR-003 | Maintainability    | Templates and components should be reusable across the current four reports and future reports. | Must     |
| NFR-004 | Security           | Admin/CMS access must be protected through appropriate authentication and permissions.          | Must     |
| NFR-005 | Browser support    | Support modern evergreen browsers including Chrome, Edge, Safari and Firefox.                   | Must     |
| NFR-006 | Scalability        | Platform should support additional Digital WIR reports in future.                               | Should   |
| NFR-007 | Content governance | Content publishing and approval responsibilities must be confirmed with PSA.                    | TBC      |

## 12. Accessibility and responsive requirements

The experience should be designed and implemented in line with WCAG 2.2 AA principles where feasible. Accessibility must be considered from UX and design through to development and QA.

| ID       | Requirement                                                           | Priority |
|----------|-----------------------------------------------------------------------|----------|
| A11Y-001 | Use semantic headings and logical page structure.                     | Must     |
| A11Y-002 | All interactive controls must be keyboard accessible.                 | Must     |
| A11Y-003 | Text and important UI elements must meet contrast requirements.       | Must     |
| A11Y-004 | Charts and maps must include accessible alternatives or descriptions. | Must     |
| A11Y-005 | Links and buttons must have clear labels and visible focus states.    | Must     |
| A11Y-006 | Content should not rely on colour alone to convey meaning.            | Must     |

| ID      | Breakpoint/use case     | Requirement                                                                                                |
|---------|-------------------------|------------------------------------------------------------------------------------------------------------|
| RWD-001 | Desktop / large screen  | Primary design target for presentation use; recommended 1920 x 1080 design consideration.                  |
| RWD-002 | Standard desktop/laptop | Common browsing layout, e.g. 1440px wide.                                                                  |
| RWD-003 | Tablet                  | Report cards and page sections should stack/reflow cleanly.                                                |
| RWD-004 | Mobile                  | Core content, navigation and CTAs must remain accessible; complex charts may need simplified presentation. |

## 13. Dependencies, assumptions and open questions

### 13.1 Assumptions

- The four uploaded 2026 reports are the current active reports for the first Digital WIR platform release.
- The Local Government WIR is the first detailed mapping example and will inform reusable templates for other reports.
- The Digital WIR Home Page and report-specific Transition Landing Pages are in scope.
- Final design will be created in Figma after discovery and wireframe alignment.
- Technical architecture will be confirmed by the Dev Lead and may affect CMS/data implementation details.

### 13.2 Dependencies

| ID      | Dependency                                                                                                          | Priority |
|---------|---------------------------------------------------------------------------------------------------------------------|----------|
| DEP-001 | Final backend engine decision if a single API engine must be selected (Node.js/Express, Python/FastAPI, or hybrid). | High     |
| DEP-002 | Final sitemap/IA approval.                                                                                          | High     |
| DEP-003 | Confirmed CMS/admin workflow and editor permissions.                                                                | High     |
| DEP-004 | Final approved content and PDF assets from PSA.                                                                     | High     |
| DEP-005 | Brand/design guidance and any PSA website integration constraints.                                                  | Medium   |
| DEP-006 | Analytics/tagging requirements and platform access.                                                                 | Medium   |

### 14.3 Open questions

| ID     | Open question                                                                                                                             |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------|
| OQ-001 | Confirm whether the backend application engine will be Node.js (Express), Python (FastAPI), or a hybrid approach.                         |
| OQ-002 | Will PSA editors update structured chart/data content directly, or will updates be handled by 23 Digital?                                 |
| OQ-003 | Should the Digital WIR Home Page show future/TBC reports, or only active 2026 reports? Current assumption: only active 2026 reports.      |
| OQ-004 | Will video/visual placeholders be real content at launch or wireframe/design placeholders only?                                           |
| OQ-005 | What is the approved PDF/appendix handling rule for participant lists and long appendices? Current assumption: PDF-only unless requested. |

## 15. Acceptance criteria and approval gates

| ID     | Acceptance criterion                                                                                         |
|--------|--------------------------------------------------------------------------------------------------------------|
| AC-001 | Digital WIR Home Page displays four active 2026 reports and links to correct transition pages.               |
| AC-002 | Each Transition Landing Page clearly presents Introduction and Executive Summary as two equal entry options. |
| AC-003 | Introduction and Executive Summary anchor pages use the approved navigation return behaviours.               |
| AC-004 | Reusable templates can support Local Government WIR content and be adapted for other reports.                |
| AC-005 | Pages meet agreed accessibility, responsive and performance requirements.                                    |
| AC-006 | CMS/admin functionality meets confirmed content management workflow.                                         |
| AC-007 | All client-approved source content and PDF assets are correctly represented or linked.                       |

| Gate   | Approval point           | Purpose                                                                                   |
|--------|--------------------------|-------------------------------------------------------------------------------------------|
| Gate 1 | Discovery/SRS approval   | Confirm requirements, scope, terminology, assumptions and open questions.                 |
| Gate 2 | Sitemap/IA approval      | Confirm platform flow, report flow and page hierarchy.                                    |
| Gate 3 | Wireframe approval       | Approve page-level UX structure before visual design.                                     |
| Gate 4 | UI design approval       | Approve visual design direction and component system.                                     |
| Gate 5 | Development build review | Review implemented templates and interactions.                                            |
| Gate 6 | UAT approval             | Validate content, navigation, accessibility, responsiveness and stakeholder requirements. |
| Gate 7 | Go-live approval         | Final sign-off for launch.                                                                |

## Appendix A. Local Government WIR page mapping

The following mapping reflects the latest supplied Local Government Workforce Insights Report 2026 PDF page numbers and is included to support wireframing and template planning.

| Report section                                      | PDF page(s) | Digital treatment                                      |
|-----------------------------------------------------|-------------|--------------------------------------------------------|
| About Public Skills Australia                       | 3           | Introduction/reference pathway                         |
| Executive Summary                                   | 4-5         | Executive Summary anchor page                          |
| Introduction / Structure                            | 6           | Introduction anchor page                               |
| Methodology                                         | 7-8         | Introduction/reference pathway                         |
| Drivers of Change                                   | 9-10        | Presentation and reference content                     |
| Local Government Industry-Sector Overview           | 11-12       | Industry overview/data template                        |
| State and Territory Workforce Profile               | 13-20       | Map/profile/data dashboard template                    |
| Industry Profile                                    | 21-22       | Data dashboard/profile template                        |
| Workforce Insights                                  | 23-30       | Theme and insight templates                            |
| 2026 Proposed Local Government Workforce Strategies | 31-32       | Strategy template                                      |
| Workforce Insights: Update on 2025 Strategies       | 33-35       | Strategy update template                               |
| Existing Industry-Sector Strategies                 | 36-47       | Existing strategies template                           |
| Federal Government Initiatives                      | 48-58       | Federal initiatives/reference template                 |
| 2027 and Beyond                                     | 59          | Looking Forward template                               |
| Appendix A                                          | 60+         | PDF-only by default unless PSA requests web recreation |

## Appendix B. Recommended first wireframe sequence

| Order | Wireframe                                   | Purpose                                                   |
|-------|---------------------------------------------|-----------------------------------------------------------|
| 1     | Digital WIR Home Page                       | Report gateway showing four active 2026 reports.          |
| 2     | LG WIR Transition Landing Page              | Decision page between Introduction and Executive Summary. |
| 3     | LG WIR Introduction Page                    | Reference/individual reading anchor page.                 |
| 4     | LG WIR Executive Summary Page               | Presentation/big-screen anchor page.                      |
| 5     | Drivers of Change Template                  | Reusable visual context template.                         |
| 6     | Industry Overview / Data Dashboard Template | Reusable data-rich template.                              |
| 7     | Workforce Insights Template                 | Reusable theme/insight detail template.                   |
| 8     | Strategies Template                         | Reusable proposed/update/existing strategy template.      |
